

ADJUSTMENT TOOLS FOR EDITING & FIXING PHOTOS CHEAT SHEET

Before you edit your photos you may want to duplicate them so that you have the originals handy to compare with, or to set aside in case you'd like to start over. Most apps can either "revert back to original," or they leave the original and make a new copy for the edits. Not all photo editing apps have these features however.

Choose the "Auto-Adjust" tool to have the app auto-adjust your photo.

Now, using the results from the auto-adjust, you're going to start fine-tuning each adjustment tool setting.

Play with each adjustment tool setting, one-by-one, using the suggested ranges below. Move slowly through each range, increasing then decreasing it, and turning it on and off. Its ok to turn it off (or keep the setting at zero if you think that particular tool doesn't improve your photo. This is a great way to get familiar with the settings and you'll eventually find your "got-to" settings that will match up with your photography style and lighting set-up. Keep in mind, every photo is different so it's not a one-size-fits all approach. That's why we have suggest ranges instead of hard and fast rules.

BRILLIANCE	-10		+60
EXPOSURE	-3		+3
CONTRAST	0		+7
BRIGHTNESS	+10		+60
HIGHLIGHTS	-10		+5
SHADOWS	0		+50
SATURATION	-10		+25
VIBRANCE	-5		+20
TEMPERATURE	-10		0
BRIGHTNESS	+10		+60
